SUMMARY

AI Engineer and backend software engineer with 3+ years of experience across production AI systems, backend engineering, cloud infrastructure, and data science. Strong expertise in **Python, Java, TypeScript, AWS, FastAPI, Spring Boot, PostgreSQL, Docker, Kubernetes**, and event-driven systems. Experienced building **RAG applications, agentic workflows, real-time AI tools, REST APIs, ML pipelines**, and cloud-native services with focus on reliability, latency, cost, and maintainability.

TECHNICAL SKILLS

- Languages:** Python, Java, TypeScript, Go, C++, SQL
- Backend & APIs:** Spring Boot, FastAPI, Node.js, NestJS, Flask, REST APIs, WebSockets, gRPC
- AI / ML:** RAG, Agentic Workflows, LangChain, LangSmith, ChromaDB, pgvector, OpenAI, Claude, Gemini, Hugging Face, PyTorch, TensorFlow
- Cloud & Database:** AWS (ECS, ECR, Lambda, DynamoDB, S3, SageMaker, CloudWatch), PostgreSQL, MongoDB, Redis, Snowflake, Spark, Kafka, Neo4j
- DevOps & Tooling:** Docker, Kubernetes, Terraform, CI/CD, Git, Jenkins, Vercel, Supabase, Cursor, GitHub Copilot, Claude Code

EDUCATION

Arizona State University, Tempe, AZ

Jan 2024 – Dec 2025 | GPA: 3.8/4.0

MS in Computer Science. Coursework: Statistical ML, Algorithms, Cloud Computing, NLP, Data Mining, Networks

Walchand Institute of Technology, Solapur, India

Jun 2016 – May 2020 | GPA: 9.23/10

B.E. in Computer Science and Engineering. Coursework: Data Structures, Operating Systems, Big Data, Web Development

WORK EXPERIENCE

ST6 Partners, United States — *AI Engineer*

May 2026–Present

- Building production AI systems and backend workflows using **Python, TypeScript, APIs, cloud deployment**, and AI-assisted engineering practices.

Gauntlet AI, Austin, TX — *AI Engineer*

Feb 2026–Apr 2026

- Shipped 12+ production AI applications across **RAG, agentic workflows, real-time voice, and AI orchestration**, with live deployments, cost governance, and evaluation frameworks.
- Built **Jarvis**, a real-time voice assistant with adaptive jitter buffering, 24 integrated tools, Whisper STT, edge-tts, and sub-second conversational latency.
- Built **LegacyLens**, a RAG system for semantic search over 150K+ lines of LAPACK Fortran using ChromaDB, Voyage embeddings, and Gemini 2.5 Flash.
- Built **GhostGuide**, an AI agent layer for portfolio analysis with 25 tools, hallucination checks, and a NestJS, Angular, PostgreSQL, and Redis backend.

Tech: Python, TypeScript, FastAPI, NestJS, Next.js, LangChain, ChromaDB, PostgreSQL, Redis, Docker, Vercel

ZenZiee (YesTech Corp.), NJ, USA — *Software Engineer*

Jun–Dec 2025

- Built **ZenZiee**, a gamified social application integrating **real-time APIs, analytics dashboards, and user sentiment tracking** for 100+ beta users.
- Deployed containerized microservices using **AWS ECS/ECR, ALB, and CloudWatch**, achieving 99.9% uptime and low-latency data synchronization.
- Designed **event-driven pipelines** with **DynamoDB Streams, AWS Lambda, and S3**, reducing p99 processing latency from 800ms to 320ms.
- Collaborated with ML and frontend teams to embed emotion classification models, increasing user engagement by 25%.

Tech: AWS ECS, Lambda, DynamoDB, S3, Redis, Docker, Python, PostgreSQL, React, Swift, CloudWatch

Builddoors Lab Ltd, London, UK — *Data Scientist*

Jan–Dec 2023

- Developed a blockchain-based fraud detection system, reducing risk exposure by 35% through **real-time anomaly detection**.
- Automated ETL pipelines and built compliance dashboards using **Python, SQL, Pandas, Tableau, and Power BI**, improving reporting reliability across cross-functional teams.
- Deployed ML models on **AWS SageMaker** with automated retraining and monitoring workflows, including evaluation metrics to track performance over time.

Tech: Python, TensorFlow, SQL, Pandas, Power BI, Tableau, AWS SageMaker, S3

Infosys Ltd, Pune, India — *Software Engineer*

Nov 2020–Jul 2022

- Designed Java **Spring Boot** microservices and **REST APIs** for enterprise billing systems, reducing manual effort by 50% and improving accuracy by 40%.
- Improved backend performance by refactoring **MSSQL queries**, increasing throughput by 35%; managed 1M+ **EDI transactions/month** under strict SLAs.
- Implemented **CI/CD pipelines, monitoring, and deployment automation**, reducing release cycles by 45%.

Tech: Java, Spring Boot, MSSQL, IBM Sterling B2B, Jenkins, REST/gRPC, Linux

PROJECTS

EventIQ — AI-Powered Real-Time Event Intelligence Platform

- Built a distributed event-processing platform using **Kafka/Redpanda, GPT-4 anomaly detection, WebSocket dashboards, PostgreSQL, Redis, Docker, and Terraform**.

Logical Language Modeling for Reasoning

- Fine-tuned **LLaMA 3.2** on OpenWebMath with reweighted loss; improved **LogiQA** accuracy by 28% and applied attention diagnostics for logical consistency.
